Handbook of Cross-Cultural and Multicultural Personality Assessment This volume presents findings from recent research focusing on young people and the way they relate to religion in their education and upbringing. The essays are diverse and multidisciplinary - in terms of the religions they discuss (including Christianity, Islam and Sikhism); the settings where young people reflect on religion (the classroom, youth club, peer group, families, respective religious communities and wider society); the different perspectives which relate to religious education and socialisation (the teaching of RE, the role of teachers in pupils' lives, the way teachers' personal lives shape their approach to teaching, school ethos and social context, and the place and rationale of RE); the contexts within which the authors work (different national settings and various academic disciplines); and the methodology used (qualitative, quantitative and mixed-method approaches). The authors make important contributions to the debate about the role of religious education in the curriculum. They demonstrate the crucially important formative influence of religious education in young people's lives which reaches well into their adulthood, shaping religious and other identities, and attitudes towards the 'other' - whatever that 'other' may be. This book was originally published as a special issue of the Journal of Beliefs & Values.

They consider research methodology, the design and construction of standard objective and projective tests, the use of measures of acculturation, racial identity, and culture-specific tests, the social etiquette of service delivery, and the interpretation of test data for clinical diagnosis. Ranging widely through all the relevant issues, they share a common collective vision of how culturally competent services should be delivered to clients. **Handbook of Psychology, History of Psychology**
This book is the first to bring together researchers in individual differences in personality and temperament to explore whether there is any unity possible between the temperament researchers of infancy and childhood and the major researchers in adult personality. Prior to the workshop which resulted in this volume, the existing literature seemed to document a growing consensus on the part of the adult personality researchers that five major personality dimensions -- the "Big Five" -- might be sufficient to account for most of the important variances in adult individual differences in personality. In contrast to this accord, the literature on child and infant individual differences seemed to offer a wide variety of opinions regarding the basic dimensions of difference in personality or temperament. The editors believed that they could encourage researchers from both the adult and child areas to consider the importance of a lifespan conceptualization of individual differences by discussing their research in terms of a continuity approach. Written by some of the most distinguished scholars from Great Britain, continental Western Europe, and Eastern Europe as well as the United States and Canada, the chapters present a cross-cultural view of both adult personality and temperament in infancy and childhood. By sharing their recent data, techniques, and theoretical speculations, the chapter authors communicate the research enthusiasm engendered by the growing consensus of the adult "Big Five" as well as the exciting prospects of an integrative program of research from infancy to adulthood that will clarify and consolidate what is now a disparate set of methods, theory, and findings across the lifespan. The editors suggest that this volume will have considerable heuristic value in stimulating researchers to conceptualize their work in developmental, lifespan approaches that will lead to a consolidation of individual differences research at every age.

**Handbook of Individual Differences in Social Behavior**
Investigating the hitherto unexplored topic of how young people understand and relate to religious diversity in the social context in which they are growing up, this book makes a significant contribution to the existing body of literature on religious diversity and multiculturalism. It closes a gap in knowledge about young people’s attitudes to religious diversity, and reports data gathered across the whole of the UK as well as comparative chapters on Canada, USA and continental Europe. Reporting findings from both qualitative and quantitative research which reveal, for example, the importance of the particular social and geographical context within which young people are embedded, the volume addresses young people's attitudes towards the range of 'world religions' as well as non-religious stances and offers an interdisciplinary approach through the different analytical perspectives of the contributors.
